Kurdish

B1

generating a
colorpalette for the
user with the ChatGPT
API

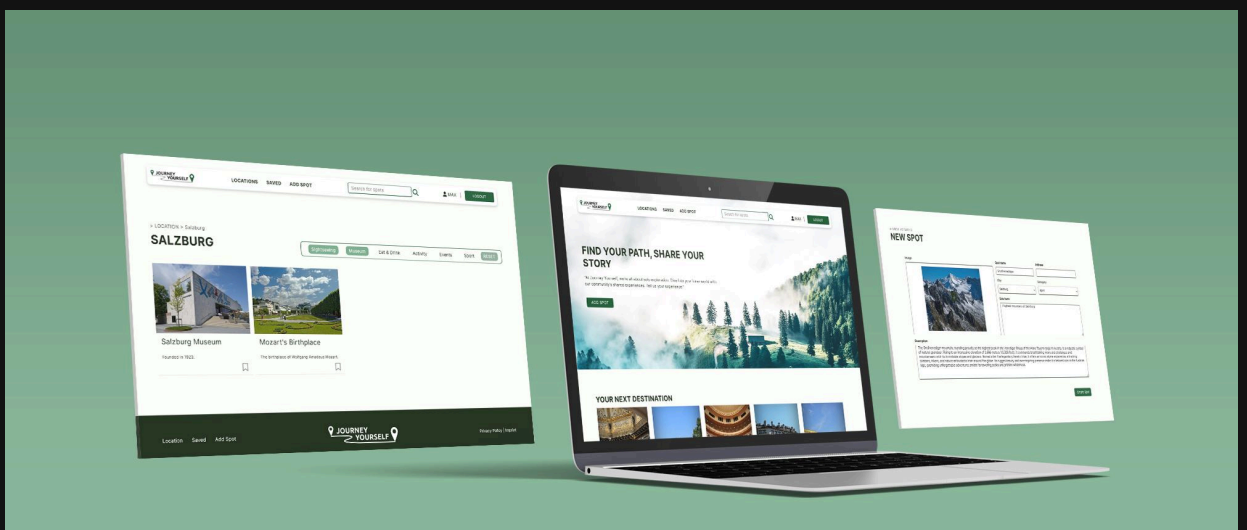

GRADIEN

Fullstack React Web Application

Role: Frontend Developer and Designer

Focused on generating personalized color palettes based on user-selected attributes such as skin tone, eye color, and hair color.

- Designed and developed the frontend using React
- Integrated with the backend, which was developed by my team
- Implemented a feature where ChatGPT captures user input and, using a custom script, generates a unique color palette.

JOURNEY YOURSELF

Backend Ruby on Rails Web Application

Role: Fullstack and Designer

In a third-semester project, my partner and I developed a platform designed for solo travelers.

- Built a backend infrastructure using Ruby on Rails
- Focused on critical features such as spot-saving functionality, advanced filtering options, and efficient data management.
- Prioritized backend performance, reliability, and scalability to provide a smooth user experience.
